The invention relates to a novel isolated SECP (secreted protein)

Complepetide. The polypeptide of the invention demonstrates

Comeroprotective, relaxant, antithyroid, antidiabetic, cytostatic,

dermatological, immunosuppressive, antiinflammatory, thyromimetic,

antiallergic, cerebroprotective, gastrointestinal, hepatotropic,

continuities anticonvulsant, antiparkinsonian, antibacterial,

cantineumatic, cardiant, cardiovascular, anti-HIV and nootropic,

antiparasitic, fungicide, protozoacide, virucide, uropathic,

antirheumatic, cardiant, cardiovascular, anti-HIV and nootropic

contivities. The polypeptide may be useful in diagnosing, preventing and

treating disorders including neurodegenerative disorders such as

creating disorders including neurodegenerative disorders particularly

compotonic dystrophy and catatonia, endocrine disorders particularly

cdiabetes and Grave's disease, cancers such as leukaemia, cervical or

chreat cancer, immunological disorders including scleroderma, systemic

compotonic dystrophy and allergies, gastrointesfrial disorders

compotonic dystrophy and allergies, gastrointesfrial disorders

compotonic dystrophy and allergies, gastrointesfrial disorders

compotonic dystroshy still allergies, gastrointesfrial disorders

This invention relates to novel membrane proteins that are associated with differentiation and/ or metabolic function of adipocytes, in particular of muse origin. Specifically, it refers to the isolated nucleic acid molecules encoding all or part of these proteins, appropriate antibodies and screening assays useful for the development of dry compositions derived thereof. The present invention describes these compositions as useful for the treatment of diseases associated with abnormalities of adipocyte function, such that they can be used to prevent, treat or disgnose obesity, hypertension, hyperlipaemia, diabetes and arteriosclerosis. Accordingly, they exhibit anorectic, antidiabetic, antiarteriosclerosis, antilipaemic and hypotensive activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LeuGluGluMetSerGluTyr***AspAspTyrArgGluLeuGluLysAspLeuLeuGln 169

The invention relates to an isolated polymucleotide encoding a polymeptide with biological activity. The polymucleotides and polymeptide with biological activity. The polymucleotides and identification of mutations responsible for genetic disorders and other traits, to assess biodiversity, as nutritional sources or supplements. The polymucleotides may also be used as molecular weight markers, chromosome markers or map related gene positions, or as an antigen to raise anti-DNA antibodies or elicit immune response. The polypeptides are useful for raising mathbodies, as markers for tissues in which the corresponding polypeptide is expressed, for re-engineering damaged or diseased tissues, for treating myeloid or lymphoid cell disorders, in bone cartilage, tendon, ligament and/or nerve tissue growth or regeneration, in wound healing, in tissue repair and replacement, in healing of burns, incisions and ulcers, and in treating cancer. The present sequence represents CDNA encoding a novel human protein.
                                                                                                                                                                                                                                                                           are
             New polynucleotides and secreted proteins, useful for treating myeloid or lymphoid cell disorders, in bone cartilage, tendon, ligament and nerve tissue growth or regeneration, in wound healing, and in tissue repair and

The invention relates to human secreted proteins (SECP) and nucleic acid molecules encoding such proteins. SECP agonist and/or antagonist is useful for treating diseases associated with decreased expression or overexpression of functional SECP. The disorders treated include cell proliferative disorders such as cancer, arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, and psoriasis; autoimmune/ configuratory disorders such as acquired immune deficiency syndrome (ALDS), allergies, anaemia, asthma, autoimmune thyroiditis, Crohn's disease, diabetes mellitus, Goodpasture's syndrome, Grave's disease, continue, myocardial infarction, ischaemic heart disease and angina pertorial infarction, ischaemic heart disease and angina pectoris; neurological disorders such as stroke, Huntington's disease, contents, neurological disorders such as stroke, Huntington's disease, Alzheimer's disease, pick's disease, epilepsy, dementia, and parkinson's disease; and developmental disorders such as renal tubular acidosis and cushing's syndrome. SECP DNA is useful to create knock-in humanised animals (pigs) or transgenic animals (mice or rats) to model human charapy, to generate hybridisation probes useful in mapping the naturally concurring genomic sequence, and in molecular biological techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21
                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel human protein with cancer inhibiting function. Also disclosed is the polynucleotide encoding the protein, a method for preparing the polypeptide by a recombinant technique, and an antagonist against the polypeptide by a recombinant technique, and an treating diseases, such as cancers. The polypeptide is useful for treating diseases, such as cancers. The current sequence represents a human cancer inhibiting protein encoding CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              rCysProHisLysGluAsnCysGluProLysLysMetGlyProIleArgSerTyrLeuTh

                                                                                                                                                                                                            The present sequence is one of 251 novel human polynucleotides expressed in the bone marrow. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemphilia), inhibition of tumour cell proliferation, suppression on inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. Detection of the presence or increased expression of the polynucleotide or the protein it encodes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the

controlled to the polypeptide of the invention demonstrates protein)

polypeptide. The polypeptide of the invention demonstrates controlled to the polypeptide of the invention demonstrates controlled. Immunosuppressive, antidiabetic cytostatic, dermatological, immunosuppressive, antidiabetic cytostatic, carebroprotective, gastrointestinal, hepatotropic, anticonvulsant, antiparkinsonian, antibacterial, enpirotectic, fungicide, protozoacide, virucide, uropathic, antiparasitic, fungicide, protozoacide, virucide, uropathic, antiparasitic, cardiant, cardiava, anti-HIV and noctropic continuatic, cardiant, cardiava weeful in diagnosing, preventing and treating disorders including neurodegenerative disorders such as creating disorders including neurodegenerative disorders including corporate disorders including careconic dystrophy and catatonia, endocrine disorders particularly controlled disorders including scleroderma, systemic diabetes and Grave's disease, cancers such as leukaemia, cervical or breast cancer, immunological disorders including scleroderma, systemic culpuns erythematosus and allergies, gastrointestinal disorders e.g. Goodpasture's syndrome, infections particularly viral, bacterial, fungal, parasitic, cused to create humanised or transgenic animals, as well during gene to therapy procedures. The current sequence is that of the human SECP odna.
                                                                                                                                                                                                                                        Marquis JP, Lee SY, Elliott VS, Ramkumar J, Hafalia AJA;

The present invention describes primer sets for synchresising social in the present invention describes primer and an oligonucleotide complementary strand of a polyvucleotide which comprises one of the 5602 complementary strand of a polyvucleotide which comprises one of the 5602 uncleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polyvucleotide which comprises a 3'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide comprises a 1'-end sequence, where the polynucleotide comprises a 1'-end sequence, where the complementary is a least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the capture of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs as a saily without any specialised methods. AAH03166 to AAH03628 and AAH13633 to AAH0361842 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13622 represent invaries.

This full-length cDNA clone, designated cw1233 3, codes for a novel human secreted protein (see AAW69430), i.e. cw1233 3 protein. It was isolated from a human foetal brain cDNA library using methods which are selective from a human foetal brain cDNA library using methods which are selective cor cDNAs encoding secreted proteins, or was identified as encoding a secreted protein on the basis of computer analysis of the encoding protein. Homology is shown to some database sequences. The invention provides isolated polymucleotides (see AAV58754-63) obtained from human adult testis, brain, retina or placenta, or from foetal kidney or brain cDNA libraries. These are all deposited as ATCC 98353. They canced novel human secreted proteins (see AAW65423-33) that may have e.g. nutritional activity, immune stimulating or suppressing activity, haemostatic activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, antiinflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition or other activities. They may also be used for diagnostic purposes ×88888888888888888888888

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 45, Application US/08537871A
Patent No. 6838254
GENERAL INFORMATION:
APPLICANT: Raymond HAMERS-CASETERMAN
APPLICANT: Serge V. M. MUYLDERWANS
APPLICANT: Serge V. M. WUYLDERWANS
APPLICANT: Serge V. M. SERENCEN
APPLICANT: Cornelis T. VERRIPS
TITLE OF INVENTION: Production of antibodies or (functionalized)
TITLE OF INVENTION: fragments thereof derived from heavy chain immunoglobulins
                                                                                                        APPLICANT: Cecile HAMERS-CASETERMAN
APPLICANT: Serge V. M. WIVIDERMANS
APPLICANT: Leon G. J. FRENKEN
APPLICANT: Cornelis T. VERRIPS
APPLICANT: Cornelis T. VERRIPS
TITLE OF INVENTION: PROduction of antibodies or (functionalized)
TITLE OF INVENTION: Camelidae
TITLE OF INVENTION: of Camelidae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

"Isolation and structure of novel defensive peptides from frog skin.";

Bur. J. Blochem. 219:145-154(1994).

-!- FUNCTION: Possesses a potent antimicrobial activity against bacteria, fungi and protozoa. Probably acts by disturbing membrane functions with its amphipatic structure.

-!- SUBCELBULAR LOCATION: Secreted.

-!- TISSUE SEPECIFICITY: Skin.

-!- SIMILARITY: BLOGATIONS Skin.

-!- SIMILARITY: Bubganily.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PRR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypoptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, chromosome mapping, gene mapping, gene therapy, forensic; food supplement, medical imaging, diagnostic, genetic disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                composition that comprises a double stranded sirkNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P106B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19. 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide
of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New 254PID6B BIRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PID6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a 254PlD6B small interfering RNA (siRNA)

that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of F1; (5) detecting, in a sample, the presence of a 254PloBb-related protein or a 254PloBb-related protein or a 254PloBb-related protein or a 254PloBb-related protein or a catus of a cell that expresses a protein of F1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of F1; and cypress the protein of P1. 254PloBb has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PloBb gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PlD6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises,

consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pt. see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein cany of the test 90, 91, 92, 33, 94, 95, 96, 97, 98, or 93# homologous or identical to an entire amino acid sequence of P1; (2) a polymucleotide that encodes the protein; (3) a composition comprising a polymucleotide that encodes the protein of 10 a composition comprising a polymucleotide certing, in a sample, the presence of a 254PlD68-related protein or 254PlD68-related polymucleotide; (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above; (9) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD68 has cytostatic activity, and can be capted and detecting cancer. The present sequence represents a chuman 254PlD68 v.3 peptide, which is used in the exemplification of the present invention. The human 254PlD68 gene is located on chromosome 6p22.

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence witch encodes the composition that corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID No.3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that encodes the protein; (3) a composition comprising a polymucleotide that encodes the protein; (3) a composition comprising a polymucleotide that encodes the protein; (3) a composition comprising a polymucleotide that encodes the protein; (3) a composition comprising a polymucleotide content of the polymucleotide described above; (4) content is a full complement of the polymucleotide described above; (4) content is a full complement of the polymucleotide described above; (4) content is a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human composition that comprises the composition described above in a human composition that produces the antibody; (11) delivering a cytotoxic agent composition growth, reproduction or survival of cancer cells that expresses the protein of P1; (7) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1; (1) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1; and cell in gene therapy. The compositions welease the protein of P1; and cell in gene therapy. The compositions welease the protein of P1; and cells that expresses the protein of P1; and cells and detecting cancer. The present sequence represents a cell that expresses the protein of P1; and cell in the exemplification of the composition cells and dete ö Gaps 254P1D6B; small interfering RNA; siRNA; immune response; 254P1D6B-related protein; cytostatic; gene therapy; cancer; human; 254P1D6B v.5; chromosome 6. ö Length 29; 0; Indels 1.3%; Score 14; DB 8; Le 100.0%; Pred. The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or cleven contiguous amino acids of a protein of figure 2 [P1, see SEQ ID NO:3, 5 or 7 ADRO0592, ADRO0594 or ADRO0566), or a peptide included in that is at least 90, 91, 32, 93, 94, 95, 96, 97, 98, or 93% homologous or that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) constraint a mammalian immune response directed to the protein or a certatus of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition that modulates the composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and con be composition or survival of cancer cells that expresses the protein of P1; and con be useful of or treating and detecting cancer. The present exemplification of the human 254PID6B see the protein of P1 such the exemplification of the present invention. The human 254PID6B gene is located on chromosome 6p22.

The present introductions a 2347100 Small inteleting. The present interaction that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the curresponds to subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists of a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in comparison that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98 homologous or identical to an entire amino acid sequence of Pl; (2) a polynucleotide contact in a full complement of the polynucleotide described above; (4) composition composition that a protein or a 254PlD6B-related polynucleotide described above; (4) composition in that modulates the composition described above; (4) a cell that expresses a protein of Pl; (7) a pharmaceutical composition that modulates the composition that modulates the composition described above; (8) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that expresses the antibody; (10) a contract of agent to a distribute of a contract of agent or a distribute or a contract of agent or a distribute or a contract of agent or a distribute or a contract or agent the arrangement of a contract or a gent to a contract or a contract or a protein of Pl; (7) a pharmacoutical contract or a protein or a protein of Pl; (8) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that expresses the antibody; (10) a non-human transgenic animal that expresses the antibody; (10) a non-human transgenic animal that expresses the antibody; (10) a non-human transgenic animal that expresses the antibody; (10) a non-human transgenic animal that expresses the antibody; (10) a non-human transgenic animal that expresses the antibody; (10) a non-human tran
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               or a diagnostic agent to a cell that expresses the protein of PI; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of PI. 254PLD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PLD6B peptide, which is used in the exemplification of the present invention. The human 254PLD6B gene is located on chromosome 6p22.
                                                                                                                                                        New 254PID6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PID6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a 254P1D6B small interfering RNA (siRNA)
                                                                                                                                                                                                                                                                                                                                                                   Example 9; SEQ ID NO 84; 345pp; English.

composition that comprises a double stranded siRMA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PID68 protein, or corresponds to a subsequence of the ORF, where the double stranded siRMA is 19, 20, 21, 22, 23, 24, or 25 contiguous an length. Also described: (1) a composition that comprises, consists essentially of, or consists (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or deven contiguous amino acids of a protein of figure 2 (PI, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00556), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that encodes the protein; (3) a composition comprising a polymucleotide that is a full complement of the polymucleotide described above; (4) dencetting in a sample, the presence of a 254PID6B-related protein or a 254PID6B-related polymucleotide; (6) a composition that modulates the composition that comprises the composition described above; (10) a pharmaceutical composition that comprises the composition described above; (10) a not than transganic animal that produces the antibody; (10) a not than transganic animal that produces the antibody; (10) a not than transganic animal that produces the antibody; (10) a part of the composition that modulates and a non-human transganic animal that produces the antibody; (10) a part of the composition that modulates and a non-human transganic animal that produces the antibody; (10) a part of the composition that produces the antibody; (10) a part of the composition that the antibody or the fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          hybridoma that produces the antibody; (11) delivering a cytocoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 24P1D6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254P1D6B peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                 New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                    The present invention describes a 254P1D6B small interfering RNA (siRNA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the composition that corresponds to a subsequence of the ORF, where the cube stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous cucleotides in length. Also described: [1] a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID ONC), 5 or 7 ABR00595, ABR00596, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein can or of that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or dentical to an entire amino acid sequence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) detecting, in a sample, the presence of a 254P1D6B-related polymucleotide; (6) a composition that modulates the cappacition that comprises the composition described above in a human composition that the antibody or its fragment, which is monoclonal; (9) which shams that antibody or its fragment, which is monoclonal; controlled and antibody or its fragment, which is monoclonal; controlled and antibody or its fragment, which is monoclonal; controlled and antibody or its fragment, which is monoclonal; controlled and antibody or its fragment, which is monoclonal; controlled and antibody or its fragment and an antibody or a protein or a controlled and antibody or its fragment, which is monoclonal; controlled and antibody or its fragment, which is monoclonal; controlled and antibody or its fragment, which is monoclonal; controlled and antibody or its fragment, and an antibody or its fragment and an antibody or in a sequence of a controlled and antibody or interface or an antibody or an antibody or an antibody or an antibody or an antibody or an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    or a diagnostic agent to a cell that expresses the protein of PI; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of PI. 254PLD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PLD6B peptide, which is used in the exemplification of the present invention. The human 254PLD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hybridoma that produces the antibody; (11) delivering a cytotoxic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Indels

ADR00722 standard; peptide; 9 AA

254P1D6B; small interfering RNA; siRNA; immune response; 254P1D6B-related protein; cytostatic; gene therapy; cancer; human;

Human 254P1D6B peptide SEQ ID NO:170.

04-NOV-2004 (first entry)

ADR00759;

ADR00759 standard; peptide; 9 AA.

```
The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the corresponds to a subsequence of the ORF, where the capture stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 21, 22, 23, 24, or 25 contiguous concleted siRNA is 20, 21, 22, 21, 22, 23, 24, or 25, 21, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 23, 24, 22, 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hybridoma that produces the antibody; (11) delivering a cycloxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of Pl. 254PlD6B has cyclostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting

chromosome 6. Homo sapiens.

```
The present invention describes a 254Plb6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the cast and open reading frame (ORF) sequence of the ORF, where the 254Plb6B protein, or corresponds to a subsequence of the ORF, where the couble stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists as essentially of, or consists of a peptide included in contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID CC onsists as essentially of, or consists of a protein of figure 2 (Pl, see SEQ ID CC onsists of peptides, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein cthat is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 32, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) generating a mammalian immune response directed to the protein of a cell that expresses a protein of Pl; (7) a pharmaceutical composition that modulates the composition that modulates the composition that modulates the composition that produces the antibody or its fragment, which is monoclonal; or a non-human transgenic animal that expresses the protein of Pl; and correcting a call that expresses the protein of Pl; and correction or all that expresses the protein of Pl; and correction or all problems that produces the antibody; (10) a composition or survival of cancer cells that corpositions molecules and methods are useful correcting one therapy. The compositions, molecules and methods are useful contacting and an encoderance of the present sequence represents the protein of the present sequence represents the presents and encoderance of the present sequence response the presents and methods are useful contacting and an encodenced and encode encoderating canner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for treating and detecting cancer. The present sequence represents the human 254P1D6B peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Indels

New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Example 9; SEQ ID NO 178; 345pp; English.

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID COOR); So T ARD00959, or a peptide included in any of the 42 lists of peptides of sequence of P1, (2) a polynucleotide that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) denerting a mammalian immune response directed to the protein of P1; (5) a generating in a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related protein or a 254P1D6B-related protein or a composition that modulates the composition that modulates the composition that comprises the composition described above; (4) a pharmaceutical computes of a composition that modulates the composition that comprises the composition and that composition and that comprises the composition and that comprises the composition described above in a human contract and a protein of a composition that modulates the composition that modulates the composition that modulates the composition that comprises the composition described above in a human contract and an antibody or its fragment, which is monoclonal; (9) which does form; (8) an antibody or its fragment, which is monoclonal; (9) a contraction or a contraction or a composition and an antibody or its fragment, which is monoclonal; (9) a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction or a contraction o or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254P1D6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254P1D6B peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22. hybridoma that produces the antibody; (11) delivering a cytotoxic agent

Sequence 9 AA;

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the cash protein, or corresponds to a subsequence of the ORF, where the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, 5 or 7 ADROGS2, ADROGS4 or ADROGS56), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein contiguous that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of a 254P1D6B-related protein or a 254P1D6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition described above in a human cuntiled or shimman transgenic animal that produces the antibody; (10) a pnarmaceutical continual transgenic animal that produces the antibody; (10) a pnarmaceutical continual transgenic animal that produces the antibody; (10) a pnarmaceutical continual composition that modulates animal that produces the antibody; (10) a pnarmaceutical continual composition animal that produces the antibody; (10) a pnarmaceutical continual continual animal transgenic animal that produces the animal animal animal transgenic animal that produces the animal animal transgenic animal that produces the animal animal transgenic animal that produces the animal animal transgenic animal that produces the animal animal animal transferince animal that produces the animal animal animal transferince animal that produces the animal animal animal animal animal animal animal animal animal animal New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cytostatic activity, and can be Gaps 254PID6B; small interfering RNA; siRNA; immune response; 254PID6B-related protein; cytostatic; gene therapy; cancer; human; Ge ₩; ö Kanner SB, Raitano AB, Jakobovits A, Challita-Eid PM, Perez-Villar JJ, Paris M; 0; Indels Length 9; DB 8; Le: 0.8%; Score 9; DB 8 100.0%; Pred. The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the couble stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous couble stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of Pl; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein or a catture of a smple, the presence of a 254PlD6B-related protein or a catture of a composition that modulates the catture of a cell that expresses a protein of Pl; (7) a pharmaceutical composition that composition described above in a human
                                                                                                                                                              ö
used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254P1D6B peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New 254PID6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PiD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                              Gaps

composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P106B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 4, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADRO0592, ADRO0594 or ADRO0596, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 31, 92, 33, 94, 95, 96, 97, 98, or 99* homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide
                                                                                                                                                                                                                                                                                                   ö
unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a coll that expresses the protein of Pi; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of Pi 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a 254P1D6B small interfering RNA (siRNA)

(AGEN-) AGENSYS INC.

New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer. Kanner SB, Raitano AB, J Perez-Villar JJ, Faris M; WPI; 2004-580991/56.

Jakobovits A, Challita-Eid PM,

Example 9; SEQ ID NO 56; 345pp; English.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to 254PID6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or

cc eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID N0:3, 5 or 7 ADR00592, ADR00594 or ADR00596, or a peptide included in cany of the 42 lists of peptides, given in the specification, or a protein c that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 93% homologous or identical to an entire amino acid sequence of P1; (2) a polymucleotide control that encodes the protein; (3) a composition comprising a polymucleotide c that is a full complement of the polymucleotide described above; (4) c generating a mammalian immune response directed to the protein of P1; (5) generating a mammalian immune response directed to the protein of P1; (5) c generating in a sample, the presence of a 254PD6B-related protein or a 254PD6B-related polymucleotide; (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and can be composition or survival of cancer cells that expresses the protein of P1; 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B gene is located on chromosome 6p22. \$
